

End Shelf Units (Base & Wall)

We Make the Difference.

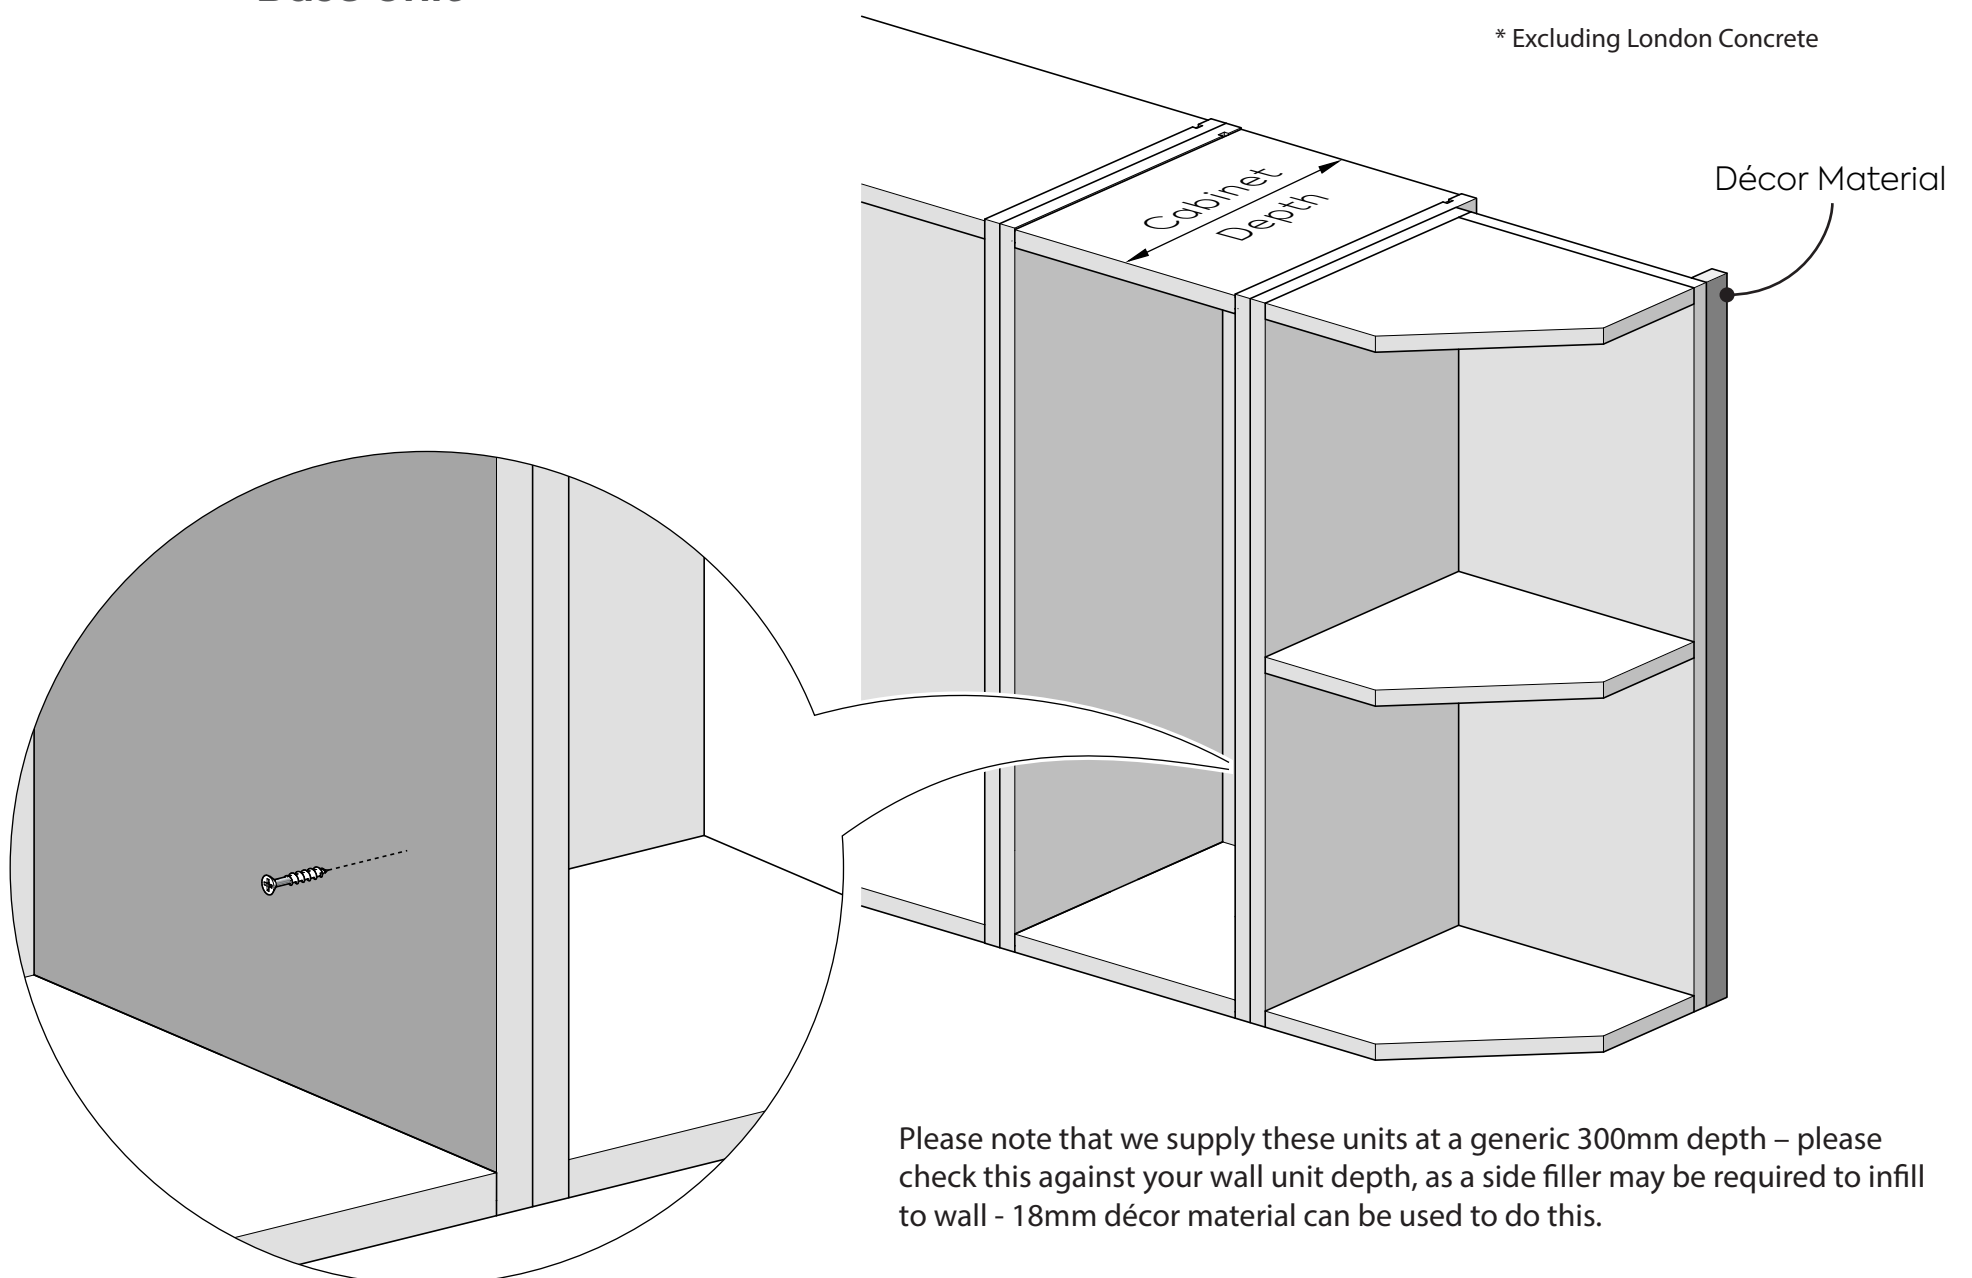

Base Unit

Wall Unit

These are made from exactly the same materials as Bella doors – the front face is the same foil as chosen door range; the other face is matching melamine*. Screws and fixings are not supplied – typically these units are easily fitted together using suitable chipboard screws from the rear face (they won't be seen when the unit is installed). Note that plinth is not supplied with the base unit option – this is formed from a standard continuous plinth.

* Excluding London Concrete

Units can be fitted into position by screw-fixing directly through adjacent cabinets.

Please note that we supply these units at a generic 300mm depth – please check this against your wall unit depth, as a side filler may be required to infill to wall - 18mm décor material can be used to do this.
